# 1. Introduction

## 1.1 Acknowledgements

I would like to thank all those institutions and individuals who have provided data for this studbook and regularly submit data to Species360. I would also like to thank Tanya Langenhorst of Marwell Wildlife for her assistance in resolving some data errors that occurred as part of the data migration process from SPARKS to the ZIMS Studbook Module. Finally, I would like to thank Species360 for helping to resolve some of the more challenging data errors after data migration to ZIMS.

## 1.2 Introduction and explanations

This is the sixteenth edition of the international studbook for scimitar-horned oryx and aims to provide information on the global captive population. The studbook database was migrated from SPARKS into ZIMS in 2020 and whilst much data have been reconciled, I am still in the process of resolving discrepancies and errors. This will be an ongoing exercise and I would greatly appreciate it if all institutions could ensure that their data for scimitar-horned oryx in ZIMS are as accurate, complete and as up-to-date as possible.

This publication contains some demographic and genetic information to inform holders of scimitar-horned oryx about the general status of the global population. However, it is not designed to supersede any analyses or breeding recommendations produced by regional coordinators. The data include all global institutions who have provided information on their collection of scimitar-horned oryx regardless of regional zoo association affiliations and membership of coordinated breeding programmes. This full register and studbook for scimitar-horned oryx updates any previously published register.

This edition of the studbook is published in two parts due to the size of the historical population of scimitar-horned oryx. Part one incorporates background and information on the current population. Part two contains the historical studbook and location glossary.

## 1.3 The captive population

The data reported in this studbook are current through to 31 December 2020. As of that date, the living population was 1561.1883.58 (3502) animals in 196 institutions. This number includes:

60.65.3 (128)	animals in 10 institutions in the African region;
252.304.9 (565)	animals in 58 institutions in the American region;
956.1136.40 (2132)	animals in 34 institutions in the Asian region;
197.283.0 (480)	animals in 83 institutions in the European region;
79.83.6 (168)	animals in 5 institutions in the Oceania region;

The remaining individuals were located in unknown locations e.g. Public, Private, Undetermined.

### *In 2020, there were:*

122.89.9 (220)	births in 47 global institutions;
55.56.1 (112)	deaths in 56 global institutions;
50.49.2 (101)	transfers in 32 global institutions

#### 1.4 IUCN Red List of Threatened Species status

The IUCN Red List of Threatened Species (Version 3.1) lists the scimitar-horned oryx as 'Extinct in the Wild' and there has been no evidence of its persistence in the wild for over 30 years. The species is listed in Appendix 1 of the Convention on Migratory Species (CMS), and in Appendix I on the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) (IUCN SSC Antelope Specialist Group, 2016). Further information can be found at [www.iucnredlist.org](http://www.iucnredlist.org).

## 2. Condensed natural history of scimitar-horned oryx

In this international studbook for scimitar-horned oryx, I summarise available information on the natural history and conservation of the species. For more detailed information see the 'biology, husbandry and conservation of scimitar-horned oryx (*Oryx dammah*)' published in 2004 and the papers and reports listed in the bibliography.

### 2.1 Taxonomy and nomenclature

<b>Kingdom:</b>	Animalia
<b>Phylum:</b>	Chordata
<b>Class:</b>	Mammalia
<b>Order:</b>	Cetartiodactyla
<b>Family:</b>	Bovidae
<b>Genus:</b>	Oryx
<b>Species:</b>	Dammah
<b>Common name:</b>	Scimitar-horned oryx (English) Oryx algazelle, Oryx de Libye (French) Begar al Ouach, Wach (Arabic) Orix de Cimitarra (Spanish; Castilian) Säbelantilope (German)
<b>Synonyms:</b>	Antilope dammah Cretzschmar, 1826 (IUCN SSC Antelope Specialist Group. 2016)

The scimitar-horned oryx was given the scientific name of *Oryx dammah* after it was described by Cretzschmar in 1826. However, examination of the available literature reveals that it has been also known as *Oryx algazelle*, *Oryx tao*, *Oryx damma*, *Oryx bezoarticus*, *Oryx ensicornis* and *Oryx leucoryx* (which now belongs to the Arabian oryx) (Dolan, 1973).

There are four species in the genus oryx; scimitar-horned oryx (*Oryx dammah*), Arabian oryx (*Oryx leucoryx*), gemsbok (*Oryx gazelle*) and beisa oryx (*Oryx beisa*) which is further sub-divided into two sub-species; beisa oryx (*Oryx beisa beisa*) and the fringe-eared oryx (*Oryx beisa callotis*) (IUCN SSC Antelope Specialist Group, 2008). It is possible to cross breed all species of oryx with each other and with addax (*Addax nasomaculatus*) and the resulting hybrids are normally fertile (Engel, 2004a).

### 2.2 Morphology

Scimitar-horned oryx are large, predominantly white antelope whose neck, shoulders and rump are stained a deep russet colour. Their faces are white with light brown stripes running down their nose, cheeks and through the eyes. Their most notable features are the long, slender scimitar-shaped horns which can grow to a length of 150cm, although the norm is approximately 90 to 115cm for an adult oryx (Newby, 1978a, 1988; Barzdo, 1982; Kingdon, 1997). There is no sexual dimorphism, although males may be slightly larger than females (Dolan, 1966; Engel, 2004). At birth, calves are a light brown colour, with adult colouration developing at three to 12 months old (Dolan, 1966; Gill & Cave-Browne, 1988; Nishiki, 1992).

### 2.3 Reproduction

Scimitar-horned oryx have a gestation period of between 242 to 300 days (approximately eight and a half months) and most of the time a single calf is born (Dolan, 1966; Dittrich, 1972; Anon, 1987; Newby, 1988). If a male is present during the female's post-partum oestrus, it is possible for females to fall pregnant again

immediately. Therefore, under favourable conditions females can have a calf every eight and a half to nine months (Nishiki, 1992; Wakefield & Engel, 2004). As such it may be necessary to separate the sexes at certain times of the year to control breeding. Calves are capable of following their mothers a few hours after birth (Dolan, 1966), but in the wild lay hidden in vegetation for the first two weeks of their life (IUCN, 1987; Gill & Cave-Browne, 1988). After two weeks they are crèched with calves of a similar age and are weaned at four to 10 months (Newby, 1974; 1984; Mayor, 1984; Gill & Cave-Brown, 1988). In captivity, the calves will be crèched in a suitable location in the enclosure. Females reach sexual maturity between 11 and 35 months, and males between 10 and 30 months (Dittrich, 1970, 1972; Dolan, 1976; Gill & Cave-Browne, 1988; Puschmann, 1989; Nishiki, 1992; Volf, 1994; Engel, 2004b).

#### **2.4 Social structure**

Before their extinction in the wild, scimitar-horned oryx typically formed herds of between 15 and 40 animals, but at certain times of the year, during their seasonal migrations or in areas of fresh pasture, aggregations of thousands could be seen (Dolan, 1966; Newby, 1978a, 1988; Barzdo, 1982, Devillers & Devillers-Terschuren, 2004). Some authors have suggested that herds were led by an adult bull (Dolan, 1966; Kranz & Ralls, 1979), but Newby (1974) reported that an adult female leads the group. Old males expelled from the herds tended to be solitary (Dolan, 1966), although it is possible that bachelor herds were formed (Engel, 2004c). Scimitar-horned oryx have a well-defined linear dominance hierarchy (Pfeifer, 1985; Engel, 2004d) which is evident in zoological institutions and at release sites in Tunisia (Wacher, 1986; Gordon, 1987; Molcanova, 2004). However, this may be disrupted if an individual is removed from the herd for some period of time and reintroduced at a later date (Engel, 2004d). The social organisation of captive scimitar-horned oryx is dictated either by the institutions in which they are held or the requirements of the regional coordinated captive breeding programme. European zoos hold all-female herds, bachelor herds, or harem groups with mixed sex calves.

#### **2.5 Ecology**

Historically, scimitar-horned oryx could be found on the arid grassy steppe that lies between the Sahel and the desert vegetation zones to the south of the Sahara (Newby, 1978a), and the Mediterraneo-Saharan transition zone to the north of the Sahara (Devillers & Devillers-Terschuren, 2003). These areas are characterised by scrub vegetation, scattered trees, rolling dunes and wooded inter-dunal depressions receiving an annual rainfall of 100 to 400mm (Dolan, 1966; Newby, 1978b, 1980, 1988; Anon, 1987). The rain falls in just one season, to the south of the Sahara this is from June to September (Anon, 1987; Newby, 1988) and to the north the rains begin in September at the earliest (E.Flach, *pers comm.*).

Shade is an important factor in modifying scimitar-horned oryx distribution, and at the hottest times of the day the oryx seek shade in wooded wadis and inter-dunal depressions to conserve water (Anon, 1987; Newby, 1988). This results in the oryx exhibiting a crepuscular activity pattern with their peak activity at dawn and dusk when they can be observed feeding (Anon, 1987; di Croce, *pers. comm.*). Scimitar-horned oryx are primarily grazers feeding on a wide variety of grasses and leguminous plants, but will occasionally take browse and other food resources such as the fallen seed pods of *Acacia tortilis* (Dolan, 1966; Anon, 1987). On fresh green pastures oryx need little drinking water as the vegetation meets their water requirements, but in the hot season scimitar-horned oryx seek out water rich plants such as the wild bitter melon *Citrullus colocynthis*, and will go to great lengths to obtain fresh water even though they are able to go without drinking for nine or ten months of the year (Dolan, 1966; Anon, 1987; Newby 1978a, 1988). The oryx

evolved a migratory response to cope with the hot season or times of drought, and in former times these great migrations in search of food and rain numbered thousands of individuals (Dolan, 1966; Newby, 1978a, 1980, 1988; Barzdo, 1982).

Historically, scimitar-horned oryx were subject to predation from a number of large carnivores including; cheetah *Acinonyx jubatus*, striped and spotted hyaena *Hyaena hyaena* and *Crocuta crocuta* respectively, wild dog *Lycaon pictus* and lion *Panthera leo*. Most predators have been exterminated from the Sahel due to systematic persecution (Newby, 1988), however they are still preyed upon by African golden wolves in Tunisia.

#### **4. Global management of scimitar-horned oryx**

Scimitar-horned oryx are managed in three coordinated breeding programmes in the North American region, European region, and Australasian region. Management in the Japanese region is carried out by the regional studbook holder. In Europe and North America the management of the breeding programmes are assisted by the Taxon Advisory Groups (TAGs) and elected advisors. Below are the contact details for the regional coordinators, studbook keepers and TAG chairs involved in the management of scimitar-horned oryx:

##### ***European EEP***

## 6. Population analyses

**Figure 1.** The age pyramid for the living global population of scimitar-horned oryx living on the 31<sup>st</sup> December 2020 (N=1561.1883.58 (3502)). The extremely large number of males and females in the 7-year age class is the result of a new institution with a very large scimitar-horned oryx collection accessioning animals with estimated birth dates to ZIMS and these animals being integrated into the studbook for the first time.

**Figure 2.** Census for the global scimitar-horned oryx population from 1872 when the species was first recorded in zoos

**Table 1. Population statistics for the global population of scimitar-horned oryx**

Demographic Summary		Genetic Summary	
30 day mortality	0.15	Founders	62
Growth rate ( $\lambda$ )	1.083	Living descendants	883.72
Growth rate ( $r$ )	0.080	% ancestry known	25%
$R_0$	1.674	% ancestry certain	17%
Generation length ( $T$ )	6.5 years	Mean inbreeding*	0.1180
		$N_e/N$	0.2828

\* The mean inbreeding is calculated from those individuals with known ancestry and therefore only represents part of the population

## 7. Studbook legend

SB ID:	Animal's permanent studbook number. Studbook numbers may not always be assigned chronologically, due to animals being recorded as they become known to the Studbook Keeper.
GAN:	Global Accession Number assigned by ZIMS
Sex:	Male, Female, and Undetermined or Indeterminate for unknown sex.
Birth Date:	Animal's birth date. A tilde mark, '~', before a date indicates that it is approximate. '??' indicates that the date is unknown.
Sire and Dam:	Studbook numbers for the animal's sire and dam. 'UNK' if unknown. 'MULT' if several candidates have been identified. 'WILD' if the sire or dam was considered to be wildcaught - this animal is a founder.
Transponder:	The transponder or microchip identification
Event:	Capture, Birth, Transfer, Loan, Ownership change, Death or Release
Date:	The date on which the event occurred. A tilde mark, '~', before a date indicates that it is approximate. '??' indicates that the date is unknown.
Location:	The institution holding the animal at the time. If the animal is no longer traceable by the Studbook Keeper, 'ltf' (lost-to-followup) will appear to the right of the last known location.
Local ID:	The identification assigned by the specimen's location, often its house number, or occasionally house name.
Owner:	The institution that owns that individual

## **8. Living**

**On the 29 January 2021**

**Ordered alphabetically by mnemonic within region**
